Question 1

2 / 2 pts

Describe Scrum of Scrums. What problem does it attempt to solve?
How is it different from SAFe?

Your Answer:

Since scrum is exceptionally expectation on the way that planning should as it were occur for short iterations, it doesn't appropriate for big business estimated organizations which need to realize where to contribute, and have a vision for the future to keep their deals up and partners cheerful. Scrum of scrums endeavors to explain this by having "parent" scrum groups responsible for a few other scrum groups, and afterward a parent scrum group responsible for all the scrum groups. This is not quite the same as SAFe since scrum of scrums doesn't take into account extensive stretches of arranging, as it remains extremely course book spry to the highest point of the pyramid of scrum groups, while SAFe follow this in the project level, yet permits for additionally extra planning and abstraction in the program and portfolio level.

Question 2**2 / 2 pts**

Describe the Project Level in the Scaled Agile Framework (SAFe).

Your Answer:

In the Scaled Agile Framework, agile team is involved in the project level. This team is made up by 3 to 10 people which includes developers who are work to develop, testers who are work to test, architects, a product owner and a scrum master. Whole this team is responsible for user stories and features which are going to be implement. At the end after every 2 to 4 week, team release a final working product.

Question 3**2 / 2 pts**

Describe the Portfolio Level in the Scaled Agile Framework (SAFe).

Your Answer:

Executive level of the company is defined as the portfolio level in the scaled agile framework. The future vision of the company is created and followed by the portfolio management. Also, they make one planned sheet for investment which consists the planning or description about goals of different investment of the company as well as the area of the company. The planned sheet are what make a vision for the organization, and the portfolio level at that point makes stories which will help make the vision a reality.

Question 4**2 / 2 pts**

What is Architectural Runway? Why is it needed?

Your Answer:

Large amount of refactoring, slowed velocity and failure to create new feature - due to these all factor release dates are missed which results into failure to maintain architectural runway. A system with architectural runway has already predefined planned infrastructure which is sufficient to allow implement all the requirements of the project for current sprint as well as which are required for future without use of too much refactoring.

Question 5

2 / 2 pts
