This attempt took 1,562 minutes.

Question 1	**2 / 2 pts**

Explain how FDD addresses the Agile Manifesto's concern about working software over comprehensive documentation.

Your Answer:

FDD addresses the agile manifesto's concern about working software over comprehensive documentation, because It shows the documentation is very important and prior requirement. It does not lead the team to do not write the documentation. But it does not allowed the documentation without the code which is not working, as it follows the path of the failure, which is not appropriable.

Question 2	**2 / 2 pts**

Explain how FDD addresses Jim Highsmith's quotation, "Agile software development is about iteration not oscillation"

Your Answer:

As the well defined process is definitely proved as the best choice and it gives the best outcome. All the steps and stage of the process should be logical. Also, all the taken important steps are immediately and easily understood by team member. so, it is worth it for the process. Moving towards the end result, 'Process pride' leads to the oscillation and keep the real work from happening. While best and good process should be always take step towards the background so that team can centralize their focus towards the end result. In short, life cycles which are short, iterative and feature-driven are the best.

Question 3   2 / 2 pts

Describe two things that FDD shares with other agile methods.

Your Answer:

Time boxed iteration: It means each iteration should be follow the specific time interval so that project will run very smoothly and will complete in expected time duration. It is very important thing in agile software development as well as in FDD.

Customer participation in planning: Customer involvement is very important. As customer can analyze the whole process and give the feedback. According to it developer can modify the feature and produce the final product as per the customer requirements. In short, customer participation expedites the process.

Question 4   2 / 2 pts

Describe FDD's Process 5: build by feature. Who's involved? What's the goal?   What are the outcomes?

Your Answer:

The class owners, operating from the design package created during the Design by Feature process, enforce the items required for their class to help the design for the features in their class.

The goal is to complete the feature. The produced code is then evaluated by the device and reviewed by the code, whose order is decided by the Chief Programmer. The code is allowed to be built after a satisfactory code review.

Outcomes of this process is, for the features testing and inspection is done and after the completion of the process the team is disbanded.

Question 5   2 / 2 pts

Describe FDD's Process 2: build a features list. Who's involved? What's the goal?   What are the outcomes?

Your Answer:

In order to decompose the domain features, a team typically containing only the Chief Programmers from process 1 is created.

The goal of this process is define all the features or product backlog which is defined as per the business needs.

Centered on the Domain Experts' partitioning of the domain in step , the team divides the domain into a variety of areas (major feature sets). A number of activities (feature sets) are further broken into each region. Each phase is defined as a function within an operation. A hierarchically categorized list of features is the result. All features are small enough to implement within ten days.

Question 6   0 / 0 pts

"I pledge on my honor that I have not given or received any unauthorized assistance on this assignment/examination. I further pledge that I have not copied any material from a book, article, the Internet or any other source except where I have expressly cited the source."
